

“Workshop on Solid Works”

A two day workshop was conducted on usage of the CAD software Solidworks on Wednesday, 19th October and the following day at 6p.m. for all the students. It was a delightful experience for all those who attended it.

Although Solidworks is an important tool for ME and MME students, yet it was attended by many students of other branches as well. On the inaugural day Mr. Divik Mundhra of Y15 guided the budding engineers about the basics of 2 D sketching, ranging from drawing a line to 'mirror' and 'trim entities'. Various exciting things were told and the session was quite interactive. The students were given refreshments that kept them energetic and smiling. Several Y15 students were also there solve the problems of the learners.

On Thursday, the workshop advanced further, with Mr. Divik continuing from where he left off and was later taken over by Mr. Devansh Bhardwaj of Y13 who guided the students about 3D design. The students learned as well as designed various objects, vastly applicable in real life like bottle, wheel etc.

It was a free guidance given to students, preparing them for the upcoming ASME Design Competition.
