

“Workshop on Fusion 360”

A two day workshop was conducted on usage of the CAD software Fusion 360 on Saturday, 19th August and the following day at 10:30AM. for all the students. It was a delightful experience for all those who attended it.

Although Fusion 360 is an important tool for ME and MME students, yet it was attended by many students of other branches as well. On the inaugural day we guided the budding engineers about the basics of sketching, ranging from drawing a line to advanced tools.

Various exciting things were told and the session was quite interactive. Several Y15 students were also there solve the problems of the learners.

On Sunday, the workshop advanced further, continuing from where we left off and was then further guided. It was a good opportunity for students to learn a lot from there seniors.

In the continuation with this we organised a 3D printer workshop where the students were given a brief introduction about designing and they were given a demo by printing some models.
